

Client Job Analysis

What changed, what every number means, and how to read a row.

One example client is used throughout, so all the numbers connect.

Why we built this

Operators were adding fewer job cards to save time, and no screen anywhere showed it.

The reason nobody caught it is that we had a **ceiling** but no **floor**. The system blocked job number 31 for a client, but never once asked why only 3 were added.

It was actually worse than that. Both daily Discord reminders measured the wrong thing.

REMINDER	WHAT IT DID	THE SIDE EFFECT
8 PM "please apply"	Fired whenever a client had saved cards waiting.	Add fewer cards, get nagged less.
1:30 PM "zero saved"	Fired only at exactly zero saved cards, counted over all time.	One leftover card from three weeks ago switched it off forever.

So adding less made Discord quieter, not louder.

The system was rewarding exactly the behaviour we wanted to stop. That is what these changes remove.

Meet our example client

5905-aysha-professional

Active · Unpaused · Professional plan · daily target 30

Every number on the following pages belongs to this one client.

1 The "Added Today" column

This is the headline number, and the one everything else hangs off.

ADDED TODAY	READING
19/30	19 cards added today. Target is 30. Eleven short.

Left number is what was added. Right number is what was expected.

The three colours mean three different things

BADGE	WHAT IT MEANS
19/30	Red. Active client, below target. Someone needs to act.
30/30	Green. Active client, target met.
0/—	Grey. No target applies. The client is Paused, Inactive, or still Onboarding.

Grey is the important one.

A paused client with 0 added is not a failure, so it must not look like one. It is not a success either, so it must not be green. Hover the grey badge and it tells you which of the three reasons applies.

"Today" does not mean midnight to midnight

The day runs **10 PM to 10 PM IST**.

That is not arbitrary. It is exactly the window the push cap already uses, so this number always matches the counter the extension shows the operator. If the two disagreed, nobody would trust either.

a card added 10:30 PM Monday night → counts towards **Tuesday**

2 "STALE 3d"

ADDED TODAY	READING
0/30 STALE 3d	Nothing at all has been added for 3 days.

STALE is about **silence**, not about being short. It only appears when a client has had a completely empty day or more.

WHAT YOU SEE	WHAT IT MEANS
3/30	Someone worked on them today, just not enough. No STALE.
0/30 STALE 1d	Nobody touched them today or yesterday.
0/30 STALE 6d	This client has been forgotten for most of a week.

3 "7d Avg"

Average cards added per day over the **last 7 completed days**. Today is deliberately left out: a day that is only two hours old would drag the average down and make every client look bad every morning.

Use it to answer one question: **is today normal for this client?**

ADDED 3 · 7D AVG 28 Something broke today. Yesterday was fine.	ADDED 3 · 7D AVG 4 This client is neglected every day.
---	---

Same shortfall. Completely different conversation.

There is also a **Yday** column showing yesterday's count on its own. It is currently switched off to save screen width. Search `Yday – HIDDEN` in `ClientJobAnalysis.jsx` to bring it back.

4 The attention panel

A banner at the top of the page. It is the first thing you see.

⚠️ 14 clients need attention

9 No jobs added

7 Saved but not applied

3 critical

5905 · Aysha Nijhawan

aysha.nijhawan11@gmail.com

No jobs added for 3 days

17 saved, none applied today

Click a client

Filters the table down to just them.

Click a pill

Filters the table to that problem.

Hide for this session

Hides it until you next open the browser. It comes back tomorrow on purpose, so dismissing it can never switch it off for good.

There is also a small ⚠️ next to the client name in the table itself, so a flagged client stays obvious once you scroll past the banner. Hover it to read why.

The two alerts

ALERT	FIRES WHEN	URNS CRITICAL
No jobs added	Nothing added for a full day or more.	At 2 days. By then it survived a whole cycle of reminders and nobody acted.
Saved but not applied	Cards are waiting in the saved column and nothing was applied today.	Once the last application was 2 or more days ago.

The second one is new information.

The old 8 PM reminder said "please apply" without ever checking whether anyone did. A backlog could sit untouched for a week while Discord repeated the identical message every evening.

It stays quiet for clients we owe nothing.

Paused, Inactive and Onboarding clients never raise an alert. They legitimately get nothing added, and flagging them would bury the real signal and train everyone to ignore the panel.

5 Reading a full row

Here is our example client exactly as the table shows them.

CLIENT	SAVED	ADDED TODAY	7D AVG	APPLIED	REMOVED	REMOVED BY AI	TOTAL APPS
⚠ 5905-aysha	17	19/30	11.1	117	53	2	135

"Added Today says 19 but Saved only says 17. Where did 2 go?"

They count different things.

Added Today (19)

Cards **created** today, whatever happened to them afterwards.

Saved (17)

Cards **sitting right now** in the saved column.

The answer is in the same row. **Removed by AI: 2**, and that is also a today number. The AI pulled 2 of today's 19 straight back out, either an expired posting or an exclusion-list match.

$$19 \text{ added today} - 2 \text{ removed by AI today} = 17 \text{ waiting in saved}$$

Nothing is wrong. The numbers agree.

"Total Apps says 135 but the columns add up to more."

Total Apps is Saved + Applied + Interview + Offer + Rejected .

$$17 + 117 + 1 + 0 + 0 = 135$$

The 53 **Removed** are deliberately left out, so this client has actually had **188 cards created** in their lifetime.

And the warning triangle?

17 cards are waiting and nothing went out today. That is the "saved but not applied" alert. The 117 applied is a lifetime figure spread over 13 days, not today's work.

6 The 9:30 PM Discord report

A new daily message listing every active client who is short, worst first, naming who worked on them today.

Add shortfall – 2026-08-20 (window closes 22:00 IST)

18 of 42 active clients are under target. 312 job cards added today.

- Rahul Sharma – 0/30 (0%) · today by: nobody · **no adds for 2d**
- Aysha Nijhawan – 19/30 (63%) · today by: Priya
- Neha Verma – 22/30 (73%) · today by: Arjun, Kabir

Why 9:30 PM and not later?

The day closes at 10 PM. Sending at 9:30 leaves half an hour to fix things. A report that lands after the day is already lost just gets muted.

To switch it on: set `DISCORD_ADD_SHORTFALL` to a Discord webhook URL.

Use a **separate channel** from the other two reminders. This one is a scoreboard a team lead reads top to bottom, not a per-client nag. Without that variable the report simply does not run; everything else works regardless.

7 The two old reminders, fixed

1:30 PM "zero saved"

Used to fire only at exactly zero saved cards, counted over all time. It now **also fires when nothing was added today**, however big the backlog is.

8 PM "please apply"

Now states the day's adds in the same breath:

Hi Priya, there are 17 job card(s) in saved column for Aysha's dashboard, please apply.
Added today: 19/30 – 11 short of target.

Clearing the backlog no longer reads as a finished day.

8 Other changes on the page

The duplicate "Paused" column is gone

BEFORE — TWO COLUMNS

Pause/Unpause/New

[Paused ▼]

Paused

Paused

79d

AFTER — ONE COLUMN

Pause / Unpause / New

[Paused ▼]

79d paused

The word "Paused" was printed twice. Only the day count was new information, so only it survived. Hover it for the exact date the pause started.

The whole table also got narrower. Four columns on the left lost **231 pixels** between them, measured in a real browser.

"Applied Today" now shows something useful

This column used to read "Applied on Date" and show **0 for every client** when no date was picked, which told you nothing. It now shows the applications that actually went out today, and turns amber when it is 0 while cards are waiting.

Filters and sorting

Sort (Added Today header)

Fixed quietly along the way

- Two scheduled jobs claimed an IST time in their comments but passed no timezone, so they silently depended on the server running in UTC. Now stated explicitly.
- The page caches its data for speed, but the cache had no idea when we changed the code, so newly added columns stayed blank until midnight. It now carries a version stamp and refreshes the moment new code goes live.
- A database index was added so the new counts do not slow the page down.

Quick reference

YOU SEE	IT MEANS
19/30	Active client, below target
30/30	Active client, target met
0/—	Paused, Inactive or Onboarding. No target applies.
STALE 3d	Nothing added at all for 3 days
7d Avg	Daily average over the last 7 completed days
⚠	This client has an open alert. Hover to read it.
Day boundary	10 PM to 10 PM IST, matching the push cap
Target	The client's own target, or 30 if none is set

Checking the raw data yourself

To see cards added per day straight from the database:

```
cd clients-tracking/applications_monitor_backend
export $(grep -m1 ^MONGODB_URI .env)
node scripts/check-add-rate.mjs 14
```

A quiet day is not always someone slacking.

Three things can silently block adds: a client hitting their lifetime plan limit, a database hiccup refusing pushes, or an expired extension session key. The script reminds you of all three. Rule them out before drawing conclusions about effort.
